## APPLICATIONS FOR HONDA CRF1000L AFRICA TWIN

### PART NO STX 46 PIGGYBACK: HO 646

The brand new and much sought after Honda CRF1000L Africa Twin has finally landed at bike shops around the world. Öhlins decided to tune up the rear suspension so you can maximize this adventure bikes performance. To do this, Öhlins suspension engineers have developed an STX 46 piggyback shock absorber with a remote spring preload adjuster. With both compression and rebound damping adjustment, you will be able to fine tune your ride experience.

If you want a lower set-up on gravel roads to improve stability or if you prefer a higher ride on tarmac roads to make the Africa Twin more agile that is easily changed with the remote preload adjuster. This feature also comes in handy when adding a passenger or luggage to the bike.

The rear shock swallow's everything from road vibrations and small bumps to bigger bumps and G outs, experienced during off-road riding, very effectively. With a great improvement in comfort, the shock absorber makes those long rides much more pleasant. During acceleration and cornering you'll clearly feel the improved traction and stability the bike gains from this shock.

#### STX 46 PIGGYBACK SHOCK ABSORBER FEATURES

- > Piggyback gas pressurised shock absorber
- > Adjustable compression and rebound damping
- > Hydraulic spring preload with remote adjuster
- > Öhlins setting library
- > Installed spring 95 N/mm
- > Optional spring 105N/mm (sold separately, part No. 20580-36)
