

Note!

To be used together with SD 502.

Before installing this product, check the contents of the kit. If anything is missing, please contact an Öhlins dealer.

Kit Contents

	Part No	Pcs
Bracket assy	Screw 6x12	00382-27 1
	Pin	15549-01 1
	Bracket 49/51	15550-52 1
	Washer 6.4/12/1.5	00153-04 1
	Screw 4x10	00382-25 6
	X-ring	01027-09 1
	Tool NV19	04970-01 1
	Bracket	15505-13 1
	Plug	15507-02 1
	Washer 29.7/36.3/0.30	15527-03 1
	Seal washer	15551-03 1
	Nut M24x1,5	15552-13 1
	Nut M30x1	15553-01 1
	O-ring	00579-01 1

Please note that during storage and transportation, especially at high ambient temperature, some of the oil and grease used for assembling may leak and stain the packaging. This is in no way detrimental to the product, wipe off the excessive oil/grease with a cloth.

Warning!

Before installing this product, read the Öhlins Owner's Manual. The steering damper is an important part of your vehicle and will affect the stability.

**SD 502 Mounting Kit for
Kawasaki KX250F/ KX450F/ KLX450R**

SD 522

Mounting Instructions

How to install

⚠ Warning!

It is advisable to have an Öhlins dealer install the steering damper.

When installing, consult your Vehicle Service Manual.

⚠ Warning!

Make sure the vehicle is securely supported so that it will not tip.

1

Pre-assemble the steering damper. Place nut and washer (15552-13(D), 15527-03 (C)) according to figure. Use grease on both sides of the washer (C).

2

Mount the bracket (15505-13 (B)) with the six screws (00382-25 (A)). Use thread locking fluid and tighten to 4 Nm.

3

Put the motorcycle on a workstand. Remove the front fork and triple clamps. Remove original upper steering stem nut and washer (you will not need these parts to install the Öhlins steering damper).

4

To prevent difficult removal and remounting, perform a premounting and measuring procedure; Place the fork in a vice and mount the provided bracket, triple clamps and steering damper.

4

5

5

Measure the distance between the top of the tower and the pin with a slide gauge. This is just a first rough estimation of the distance.

⚠ Caution!

The gap between the tower and the pin must be $1 +2/-0.5$ mm. The tower shall never touch the lower part of the pin at any position between the steering stops. There shall always be a visible gap. If washers are added/removed, retighten the tower to 11 Nm and use thread locking fluid.

6

If the distance is too large, use washers between pin and bracket.

Note!

The pins at the bottom of the steering damper have not been pressed into the triple clamp, which makes the distance 1mm larger.

7

Remove the steering damper and triple clamp.

8

Remove the outer ring of the upper steering head bearing. Remove the original dust seal on the bearing, if any.

9

Replace the outer ring with the bracket provided. The bracket must be press fitted into the steering head, use proper tools. Mount the provided o-ring seal on the outside of the cylindrical part of the bracket before it is press fitted.

Caution!

The bracket must be installed in a straight line. Follow the sight line on the bracket, see figure.

10

Apply some grease on the x-ring and install it (do not twist it) in to the groove on the seal washer. Put grease and install the original steering head bearing and the seal washer provided (the provided seal washer replaces the original dust seal, if any).

11

Put some grease inside the tower to avoid the noise that otherwise can occur.

12

Install the original lower steering stem nut.

Note!

MY2013, and some other models; remove the washer above the lower steering stem nut to achieve the recommended thread engagement and gap between the tower and pin.

13

Reinstall the triple clamps and fork legs. Tighten the bolts on the lower triple clamp to recommended tightening torque according to the Vehicle Service Manual.

How to install

Caution!

It is of critical importance that the damper is mounted in a straight line according to the figure. The two small pins will be pressed down into the upper triple clamp when the upper steering stem nut provided is tightened.

14

Use a torque wrench and tool 04970-01 (provided in this kit). Tighten the upper steering stem nut to 100 Nm.

Note!

All threads on the upper steering stem nut will not be used, that is correct as long as the nut is tightened properly.

Recommendation: Minimum 4 [four] full turns of engagement.

15

Again, measure the distance between the top of the tower and the pin to ensure that the gap is within the tolerance ($1+2/-0,5\text{mm}$).

16

Make sure that the steering stops work properly, Tighten the upper triple clamp bolt to recommended tightening torque.

Caution!

The steering damper should not act as a steering stop since that can damage and possibly break the steering damper.

17

Reinstall all removed parts in reversed order.

18

Install the centre lid by pressing it into the hex opening. Use an M6 screw and a pair of pliers if you must remove the lid.

Caution!

Do not try to remove the lid with a screwdriver - the lid will break!

Adjustments

⚠ Warning!

Before riding, always make sure that the basic settings made by Öhlins are according to recommended Set-up Data. Read about adjustments and setting up in the Öhlins Owner's Manual before you make any adjustments. Contact an Öhlins dealer if you have any questions about setting up the steering damper.

Recommended set-up

Motocross:

DL Valve	12 clicks
RTC Valve	6 clicks

Enduro:

DL Valve	12 clicks
RTC Valve	8 clicks
