Applications for Indian Scout

Öhlins has developed an adjustable shock absorber and a fork spring kit upgrade for the Indian Scout. The upgrades give the bike a complete new behavior with improved handling braking and an overall more comfortable ride. Öhlins shock absorbers give more stability, absorb bumps and enhance traction so you can fully utilize the power of the Indian Scouts V-Twin engine.

At the rear we have fitted the Scout with our STX 36 twin shock absorbers! The piggyback shocks feature both adjustable compression and rebound damping and length adjuster. Carefully chosen parts and springs give the Indian Scout a more plush and comfortable ride, while still being more agile and with increased stability and safety.

The Öhlins FSK 115, Fork Spring Kit, improves overall handling, cornering and braking to give the rider a noticeable enriched ride. The Indian Scout benefits from all these areas to give you a new improved experience.

FEATURES STX 36 - IN 524

- > Well proven monotube design
- > Piggyback gas pressurized system
- > Length adjustable
- > Designed for comfort and rideability
- > Application tested and tailor made to suit
- > Range of optional spring rates available

FEATURES FSK 115

- > Replacement top caps with Pre-load adjustment
- > Performance rate springs
