APPLICATIONS FOR YAMAHA TRACER 700 / TRACER 7 (FJ-07)

PART NO NIX 22: FKS 204, FKS 229 • **PART NO STX 46:** YA 429

The popular Yamaha Tracer 700 is available with both a 'front end' and 'back end' upgrade. The NIX 22 cartridge kit matches the STX 46 rear shock very well and delivers loads of performance to an already good bike.

The NIX 22 features compression damping in the left leg and rebound in the right leg, giving a more precise function and stability. With this upgrade you can now benefit from improved handling, bump absorption and crucially a positive, confidence inspiring feeling from the 'front end'. The NIX 22 is easy to install in the original fork and is a suitable upgrade for any road & track rider.

For the rear end, Öhlins has developed a STX 46 shock absorber with adjustable rebound damping you have the ability to change the characteristics of the bike. With the remote hydraulic spring preload adjuster you can change the stance of your bike to accommodate for extra weight!

NIX 22 CARTRIDGE KIT FEATURES

- > Öhlins NIX-technology
- > External compression and rebound adjustment
- > 22 mm piston diameter
- > 8 mm piston shaft
